# A MESSAGE TO ALL FLOWER GARDENERS WHO DO NOT GROW ROSES

If you are one of those who do not grow roses because you think it is too much bother to prepare the beds and too much care to look after them, please bear this in mind:—

A rose bed may be prepared in as simple or as complicated a way as you wish. If the soil is fertile and productive you don't need to worry about any special preparation. If it is poor, work in organic material such as compost, well rotted manure, peat moss or the like. Be sure to obtain good quality stock and plant them carefully by spreading out the roots and packing the soil firmly around them and watering.

If you start growing roses with a dozen or a half dozen, the only care necessary during the season is a few minutes once a week or even every other week to cultivate the bed and to dust the bushes for pests and diseases. Fertilizing two or three times a year takes but a few minutes and the same applies to winter covering, spring uncovering, pruning and watering.

That is as much time and bother as your first bed of roses will take and the blooms that they will produce throughout the season will amply reward you for your efforts.

Try a half dozen or a dozen and for more detailed information about planting and caring for them ask for the folder "A Guide for Beginners" on the coupon below.
